

$k_1 = k_2 = 1$, $h_1 = h_2 = 1$, $w_1 = 2$, $w_2 = 1$

measured set	M	harm for deficit d
---------------------	----------	---------------------------

measure channel 1 only	$M=\{1\}$	$d/2$
------------------------	-----------	-------

measure channel 2 only	$M=\{2\}$	d
------------------------	-----------	-----

measure both channels	$M=\{1,2\}$	$3d/5$
-----------------------	-------------	--------

Conservation fails because score weight and social harm use different exchange rates.
